*Resource Guides; Resource Materials; Science
Education

ABSTRACT

This resource guide is a supplement, covering the years 1973-1976, to a compendium of astronomy educational materials published in 1970. The majority of the listings are books published in English that would be of use in astronomy education. Levels are classified as follows: general public, amateur astronomers, university science students, university nonscience students, and advanced material for research or graduate study. (MH)

* Documents acquired by ERIC include many informal unpublished *
* materials not available from other sources. ERIC makes every effort *
* to obtain the best copy available. Nevertheless, items of marginal *
* reproducibility are often encountered and this affects the quality *
* of the microfiche and hardcopy reproductions ERIC makes available *
* via the ERIC Document Reproduction Service (EDRS). EDRS is not *
* responsible for the quality of the original document. Reproductions *
* supplied by EDRS are the best that can be made from the original. *

ED128212

This is a further addition to the list of astronomy educational materials, brought out by IAU Commission 46 in 1970 and updated for the first time in 1973. As in 1973, the non-English languages are being prepared separately.

The material here is not classified according to type, as most of the new material is in the form of books. The level is indicated as follows:

- GP - for the general public
- GT - for amateurs and others having a special interest
in astronomy
- UG - for university students not specializing in science
- US - for university students specializing in science
- A - advanced material at the graduate or research level

An effort has been made to have the information as accurate as possible; however, the level of the material sometimes had to be estimated on the basis of little evidence, and prices are, of course, subject to considerable change. I believe that a rough estimate on these matters is better than no information at all, but I apologize for any inconveniences caused by errors. There are undoubtedly some important omissions from this list, but the lack of help in collecting the data has made this inevitable.

Funds for the preparation and distribution of this list were provided by Steward Observatory.
